Claim 6; Page 29-30; 81pp; English.

Cytokine response proteins CR1-CR8 (AAW08133-40) are encoded by genes (see also AAT43376-83) isolated from a thiol-selected interleukin-2-induced human T-cell blast cDNA library. 6 Genes (CR1, 2, 3, 5, 6, 8) are novel. CR6 belongs to a family of small nuclear-localising gene products. It binds to p21 and may facilitate cellular proliferation by preventing the inhibitory activity of p21. Recombinant CR6 polypeptides can be

```
20-NOV-1991;

27-OCT-1994;
05-JUN-1996;
This invention describes a novel isolated antibody or antibody fragment (I) which selectively binds to a polypeptide encoded by cytokine response gene 2 (CR2) and modulates CR2 activity. The products of the invention have cytostatic, anti-allergic, immunosuppressive and antimicrobial activity. The antibodies are useful as therapeutic agents for regulating cellular proliferation and differentiation and for treating all kinds of cancers, immune diseases such as allergic, autoimmune, and rheumatologic diseases, transplant rejection, and as anti-infectives for fighting viral, bacterial, parasitic and fungal infections. This sequence represents the human CR6 protein described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CR2; human; antibody; cytokine response gene; cytostatic; anti-allergic; immunosuppressive; antimicrobial; therapy; cell proliferation; treatment; cell differentiation; cancer; immune disease; rheumatologic disease; transplant rejection; anti-infective; CR6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         produced and used to identify inhibitors of DNA replication of use anti- proliferative agents e.g. in the treatment of cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
The invention relates to a novel method for modulating pathways leading to programmed cell death, comprising selecting a target within the c-Jun-CC where the comprising selecting with the traget using the terminal kinase (JNK) pathway, and interfering with the traget using the agent that either up regulates or down regulates the JNK pathway. The method of the invention has cytostatic activity. A method of the convention is useful for modulating pathways leading to programmed cell death induced by TNFalpha, Fas, TRAIL, genotoxic agent such as the convention or cisplatinum. Another method of the invention is useful for screening and identifying an agent, preferably peptides, peptide mimetics, peptide-like molecules, mutant proteins, cDNAs, antisense coligonucleotides or constructs, lipids, carbohydrates or synthetic or natural chemical compounds, that modulate JNK pathway in vitro. A method of the invention may also be useful for treating cancer, and for preventing apoptosis. Compounds that are capable of interfering with the ability of Gadd45beta to associate with JNKK2 are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches 159;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The present sequence is used in the exemplification of the invention {\bf r}
The present invention relates to a novel method for assaying modulators of growth arrest and DNA damage-inducible (GADD) 45 proteins. The method involves incubating the compound with GADD45 in agueous solution and determining any inhibition or decrease in the binding of GADD45 gpecifically to a Cdc2 (cell division cycle-2) polypeptide. Inhibition of GADD45, a protein involved in DNA repair, results in increased sensitivity of cancer cells to DNA-damaging agents GADD45 activates a g2/M checkpoint after damage induced by UV radiation or alkylating agents and overexpression of GADD45 in normal fibroblasts arrests cells in G2/M. Compounds that inhibit GADD45 are able to sensitise proliferating cells to DNA-damaging agents, so are useful as adjuncts in treatment of cancer with UV light or chemotherapeutic agents such as cis-platin. Inhibition of GADD45 will allow a reduction in the dose of toxic DNA-damaging agents required to induce apoptosis in cancer cells. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 159 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Growth arrest and DNA damage-inducible gene 45; GADD45; Cdc2; cell division cycle-2; DNA repair; cancer; DNA-damaging agent; therapy; chemotherapeutic agent; cis-platin; apoptosis; cytostatic; human.

The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that gene expression signature of the mRNA, and using that gene expression is the patient, where gene expression of at least 60% of the genes correlates with that of the gene expression of at least 60% of further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis; diagnosis or array or gene chip, specific for rheumatoid arthritis; diagnosis or

analyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collagen-induced arthritis; and reducing the symptoms associated with collagen-induced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunosmodulatory. The methods and compositions of the present invention are useful for disgousing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, and an immune disease caused by an infectious agent. This sequence represents a protein sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic format from

Testing for bronchial asthma or chronic obstructive pulmonary disease comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from healthy subject λ̈́q

Example 11; SEQ ID NO 560; 241pp; English

> Create present invention describes a method of testing for bronchial asthma creation cobstructive pulmonary disease. The method comprises crown in a subject, comparing the expression level of a marker gene in a biological sample creation a subject, comparing the expression level determined with the capression level of the marker gene in a biological sample from a healthy crown a beautiful described; and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial crown and interpretation of the stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (I) for tresting for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to treat bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (3) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polymucleotide that suppresses the capression of the gene through an RNAi effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for corresponding to a portion of caprosic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (I) has respiratory and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention. 밁 Matches Query Match Sequence 159 Local Similarity 121 LISNPNEDAWKDPALEKLSLFCEESRSVNDWVPSITLPE 159 159; 61 61 Н VLAAGEEDEGDIALQIHFTLIQAFCCENDIDIVRVGDVQRLAAIVGAGEEAGAPGDLHCI MTLEEVRGQDIVPESTARMQGAGKALHELLLSAQRQGCLTAGVYESAKVLAVDPDNVTFC VLAAGEEDEGDIALQIHFTLIQAFCCENDIDIVRVGDVQRLAAIVGAGEEAGAPGDLHCI MTLEEVRGQDTVPESTARMQGAGKALHELLLSAQRQGCLTAGVYESAKVLNVDPDNVTFC LISNPNEDAWKDPALEKLSLFCEESRSVNDWVPSITLPE Conservative A, 100.0%; Score 826; DB 8; 100.0%; Pred. ```
Ine invention relates to methods and compositions for modulating pathways leading to programmed cell death or apoptosis. The method involves selecting a target within the c-Jun-N-terminal kinase (JNK) pathway and interfering the target by an agent that either upregulates or downregulates the JNK pathway. The JNK modulator is effective in treating degenerative disease and cancer. The method and compositions of the invention are useful in immunotherapy, cancer chemotherapy and in gene therapy. The present sequence is the human gadd45 protein which is a modulator of JNK pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1.T 8

The invention relates to a method for identifying a patient with a higher crisk of preeclampsia. The method comprises: (a) assaying a sample from the patient to determine the level of a mRNA or other polynucleotide within the sample from the patient with an antibody seample from the patient with an antibody that specifically contacting a sample from the patient with an antibody that specifically binds to a polypeptide of AED74025-AED74876 to determine the level of polypeptide within the sample, and comparing the level to a standard. Comprising: (a) an antibody specific for any of the polypeptides of CC comprising: (a) an antibody specific for any of the polypeptides of CC comprising: (a) an antibody specific for any of the polypeptides of ED74025-AED74876 or their fragments; or (b) a polynucleotide sequence comprising any of AED73173-AED74024 coupled to a surface; and (c) a standard for any of the polypeptides of AED74025-AED74876 or any of the polypeptides of antibody specific for any of the polypeptides of antibody specific for any of the polypeptides of antibody specific for any of the polypeptides of AED74025-AED74876 or one or more purified polypeptides of AED74025-AED74876, to ameliorate signs or symptoms of preeclampsia; (2) a pharmaceutical composition comprising and composition sequence or symptoms of preeclampsia; and (3) a method of treating preeclampsia. The composition and method are useful for treating preeclampsia. The present sequence obtained from a minon acid sequence concepts and concepts of the printed specification, but was obtained in electronic format directly of the printed specification, but was obtained in electronic format directly concepts the present sequence abtained in electronic format directly concepts the printed specification, but was obtained in electronic format directly concepts the printed specification, but was obtained in electronic format directly concepts the printed specification.
Identifying a patient with a higher risk of preeclampsia comprises nucleic acid hybridization assay or antibody assay to determine level a specific nucleic acid (mRNA) or polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 2; SEQ ID NO 1127; 358pp; English.

The present sequence is the protein sequence for the human SYG972 gene. SYG972 protein is involved in cell differentiation. SYG972 gene is highly expressed in normal differentiated tissues. However, in cancerous tissues, SYG972 gene expression is inhibited. This characteristic of SYG972 gene expression may be used in cancer diagnosis, especially breast cancer. In addition, the SYG972 gene may be used in distinguishing B cells and T cells in determining the origin of cancer in various lymphomas. SYG972 gene and promoter are useful for designing and screening drugs to promote or inhibit apoptosis and differentiation of cells, especially to screen drugs to treat diseases where cell differentiation and apoptosis occur abnormally e.g. cancer, Alzheimer's disease, Parkinson's disease and degenerative nervous diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ry Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This protein comprises novel human GRP17 (Gadd45 and MyD118 related protein, 17 kDa), a protein encoded by a gene associated with arrest of cell growth and induction of DNA damage. The amino acid sequence was deduced from cDNA clone GEN-554H06 (see AAT74047-48) isolated from a human placental cDNA library. GRP17 protein shows 55% identity with gadd45 and 52% identity with MyD118, both of which are tumour suppressors. It can be expressed in the usual vector/host cell systems. The GRP17 gene is useful for the diagnosis and treatment of cancer, malformations and autoimmune diseases, as well as for screening drugs fo treatment of these conditions. Recombinant GRP17 protein can be used to treate antibodies for the purification, assay and identification of GRP17

The invention relates to a novel method for modulating pathways leading to programmed cell death, comprising selecting a target within the c-Jun-N- terminal kinase (JNK) pathway, and interfering with the target using an agent that either up regulates or down regulates the JNK pathway. The method of the invention has cytostatic activity. A method of the invention is useful for modulating pathways leading to programmed cell death induced by TNFalpha, Fas, TRAIL, genotoxic agent such as deunorubicin or cisplatinum. Another method of the invention is useful for screening and identifying an agent, preferably peptides, peptide mimetrics, peptide-like molecules, mutant proteins, cDNMs, antisense oligonucleotides or constructs, lipids, carbohydrates or synthetic or natural chemical compounds, that modulate JNK pathway in vitro. A method of the invention may also be useful for treating cancer, and for preventing apoptosis. Compounds that are capable of interfering with the ability of Gadd4sbeta to associate with JNKK2 are useful for treating human diseases such as chronic inflammatory, and autoinmune conditions and certain types of cancer. The present sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modulating pathways leading to programmed cell death, by selecting a target within Jun-N-terminal kinase pathway and interfering with the target using agent that up or down regulates the JNK pathway.

CY
The present invention describes a method of testing for bronchial asthma CC or chronic obstructive pulmonary disease. The method comprises CC determining the expression level of a marker gene in a biological sample CC from a subject, comparing the expression level determined with the CC expression level of the marker gene in a biological sample from a healthy CC expression level of the marker gene comprises: (a) a group of CC obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial CC genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are composed to the properties of the marker gene when respiratory epithelial cells are composed for bronchial asthma or chronic obstructive pulmonary disease; (c) a kit for screening for a candidate compound for a therapeutic agent composed for bronchial asthma or chronic obstructive pulmonary disease; (d) a animal model for bronchial asthma or chronic obstructive pulmonary disease; (d) a marker gene or an animal model for bronchial asthma or chronic obstructive pulmonary disease; (d) a sthma or chronic obstructive pulmonary disease; (d) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the compound, a protein encoded by a marker gene; and (7) a DNA chip for testing for composition of the present inventive pulmonary disease, on which a protein encoded by a marker gene; and (7) a DNA chip for testing for composition of the present of the present invention.

CC and antiasthma or a chronic obstructive pulmonary disease, on which a protein encoded by a marker gene; and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for conditions.

The invention relates to methods and compositions for modulating pathways leading to programmed cell death or apoptosis. The method involves selecting a target within the c-Jun-N-terminal kinase (JNK) pathway and interfering the target by an agent that either upregulates or downregulates the JNK pathway. The JNK modulator is effective in treating degenerative disease and cancer. The method and compositions of the invention are useful in immunotherapy, cancer chemotherapy and in gene therapy. The present sequence is the mouse gadd45 protein which is a modulator of JNK pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25-JUL-2003; 2003US-00626905.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for CC are associated with carcinomas. The sequences are useful for: (i) for CC screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for treating CC carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for CC (A genes are useful as DNA vaccines and the CAP are useful as markers of CC carcinoma including lymphoma. The present sequence is one such CAP. Note: CC This patent is an equivalent to basic patent US2002182586A1, for which no CC carcinome and the cAP are useful as markers of CC carcinoma including lymphoma. The present sequence is one such CAP. Note: CC sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Generating a protein-interaction network of huntingtin, useful for diagnosing and treating Huntington's disease, comprises contacting (poly) peptides with the disease-related (poly) peptides.

Disclosure; Fig 6; 161pp; English.

The invention relates to a method of generating a network of direct and indirect interaction partners of a disease-related (poly)peptide comprises contacting a selection of (poly)peptides suspected to contain direct or indirect interaction partners with the disease-related (poly)peptides and optionally with known direct or indirect interaction partners of the disease-related (poly)peptide. The molecule, (poly)peptide, and antibody are useful for preparing a pharmaceutical composition for the treatment of Huntingtons chorea. The method is useful for generating a network of direct and indirect interaction partners of a disease-related (poly)peptide. The protein, composition, and methods are useful for diagnosing and treating Huntingtons chorea. The present segeunce represents the amino acid sequence of an interaction partner of Huntingtons chorea.
